

Marietta Bulk Mulch Supplier

What is Mulch?

There are two types of mulches, organic and inorganic. The vast majority of consumers use organic mulch, which is made from wood, leaves, and straw, and helps retain soil moisture, suppress weeds, and prevent erosion. Mulch also beautifies a landscape and is available in different colors. Organic mulches also help improve the soil's structure and texture, retain and increase nutrients, as well as regulate soil temperature.

As the premier north Atlanta mulch supplier, Pine Straw King (PSK Landscape Supply) is where to go for bulk mulch in Marietta. We also offer bulk mulch delivery to our clients at competitive rates.

What is the Difference Between Organic and Inorganic Mulch?

Mulch comes in both organic and inorganic forms. Organic mulches are composed of natural materials that can decompose, such as timber chippings, bark chips, sawdust, straw, rice hulls, grass clippings, leaves, manure, and compost. Inorganic mulches, on the other hand, comprise of tire fibers, rubber nuggets, plastic sheeting, etc.

At Pine Straw King, we are a leading bulk supplier of organic mulch. We boast of the highest quality mini nugget mulch you can order in the state of Georgia. We also supply different types and colors of mulch in bulk (yard or machine bucket scoop sale), available for pick up or delivery.

How Does Bulk Mulch Compare to Bagged Mulch?

Customers are often unsure if it's better to opt for bagged or bulk mulch. One thing to consider before you order your supply of mulch is that bagged mulch is more expensive than buying in bulk. This is especially true even if you only have a relatively small area to cover. While there's only around two square feet of mulch in a given bag costing \$3, a square yard (27 square feet) will save you about a dollar per bag.

Pine Straw King sells all our premium quality mulch in bulk amounts because we believe in providing our clients with more for less.

What are Common Uses for Mulch?

Mulches are used to retain soil moisture, suppress the growth of weeds, and prevent soil erosion. It is also commonly used for landscape aesthetics and to regulate soil temperature. Mulches are applied to the soil's surface, spread around trees, flower beds, and even laid on pathways.

At Pine Straw King landscape Supply, we go beyond selling the best quality mulches and offer guidance on how and where to install them to enjoy all their benefits. So, if you're looking for a Marietta mulch supplier, call and talk to our expert team about your options or place an order for pick-up or delivery.

Mulch for Weed Control

A two to three-inch layer of mulch helps suppress the growth of weeds in your garden. By thoroughly covering the soil with mulch, you deprive the weeds of light and also prevent those new seeds from gaining a foothold in the soil.

Mulch also slows evaporation by acting as a barrier between the ground and sunlight. Dew moisture and rainwater are trapped in the fibers of the mulch, thereby keeping the soil underneath wet longer. Through this process, mulch regulates the soil temperature and increases its ability to retain water and nutrients.

Available Types/Colors

At Pine Straw King Landscape Supply, we offer a variety of mulch types/colors to suit your needs. Our selection of beautiful color options are ideal for various functions and settings. Here are some of the mulch types/colors we offer:

- Red Mulch
- Plain/Natural Mulch
- Mini Nugget Mulch
- Brown Mulch
- Cypress Yellow/Gold Mulch
- Black Mulch

All PSK Landscape Supply Mulches are colored with environmentally friendly dyes. At Pine Straw King Landscape Supply, we only use non-toxic, water-based colorants, and binders to dye our mulches.

Benefits of Bulk Mulch

Buying mulch in bulk is much cheaper than in bags. Bulk mulch also offers you a way to get precisely as much as you'll need. Even a relatively modest space can end up needing a lot more mulch than the average person would expect. A uniform two to three-inch layer of mulch is needed to control weed growth, prevent soil erosion, and retain soil moisture.

How to Apply Mulch

Many do not realize there is a right and wrong way to lay mulch. As mentioned, a common mistake is not applying enough. To control the growth of weeds and retain soil moisture, you must apply two to three-inches of mulch to the soil.

You also must ensure sure the mulch isn't covering your desired plants, as it can limit their growth just like weeds. Also, because organic mulches decay and become soil nutrients, you

have to replace your mulch from time to time. Make it a rule to add an inch of mulch to your soil yearly or bi-yearly, either in spring or fall.

How Long Does Mulch Last

On average, it takes between six months to a couple of years for organic mulch to decay. PSK Landscape Supply mulch is graded to last between one and two seasons before needing replacement.

Buy Mulch From PSK Landscape Supply
