### Landing Page #1

#### Your Wired and Wireless Access Networks in Harmony

Unified wired and wireless access networks with common security sets, policy enforcement, and management are essential in today's IT world. To add another layer of requirements, these seamless networks need to be deployed over multiple locations, remote branch offices, and large campus environments. Is your current network able to adapt?

It doesn't stop there. Gartner reports that companies want flexibility to deploy network applications: onpremises within the enterprise, in a private cloud, or in a public cloud to avoid architectural "lockin" and to provide versatility.

To read more about the providers that are working to meet the needs of today's enterprises, access Gartner's:

Discover why they consider HP Enterprise (Aruba Networks) a leading vendor as they dive deeper into:

- Benefits of combining the number two campus switching vendor with the number two WLAN vendor
- The technology that provides guest access, device profiling, posture assessment, onboarding and more
- Aggressively priced, guaranteed, fixedform and modular switches
- Management and service applications that go beyond HP devices

Don't get stuck in the wrong part of Gartner's Magic Quadrant. Contact Corus360 for more information at 770-300-4700.

## **Email #1 (Network Management)**

### **Subject Line: Are you tied up managing your network?**

With multiple devices and BYOD becoming the norm, employees are working remotely more than ever. Productivity is skyrocketing with the ease of secure network access and employees are meeting their metrics. But are you? Or are you stalled managing a complex environment that keeps you from new and exciting projects?

Don't get caught navigating this without great partners.

## Email #2 (Operational Costs)

### **Subject Line: Take back control of your IT spend**

Advanced networking features allow IT departments to achieve flatter networks that are ideal for highly virtualized environments. With the strain of big data and converged infrastructure, this is becoming a necessity in order to achieve lower latency and increase available bandwidth.

Do you feel like your operational budget is being given an ultimatum to buy features for a future proof dynamic network? Good news: there are still options.

### **Email #3 (Passing on the Benefits)**

**Subject Line: What have your providers done for you lately?**

Today's telecom companies are constantly in flux to meet the demand for a flexible, reliable network. After all, that has become a core strength of Global 100 Companies. When was the last time your networking solutions provider made a move that directly passed on benefits?

Don't stay with a company that isn't working for you. Read your options in the latest Gartner Report:
