

INFORMATION FOR MEN

Get
your sting
back.

Plain talk about ED
(erectile dysfunction)
and what you
can do about it.

Allianz Pharma

Staman-TTM
Healthier. Safer. Smarter.

Think of it as a rite of passage.

First car. First kiss. First job. Marriage.
Retirement. Life is filled with milestones.

As you get older, you may experience health milestones, like heart disease, high cholesterol and diabetes... and erectile dysfunction (ED), especially if you're over 40.

If you have trouble maintaining an erection, it's important that you see your doctor. ED can be a symptom of a more serious health condition.

But you don't have to lose your sting because of ED. Staman-T can help you get back your vitality in the bedroom and enjoy sex again.

Healthier. Safer. Smarter.

Staman-T
Healthier. Safer. Smarter.

Practice safer sex.

Birds do it. Bees do it. But as a man gets older, sometimes he just can't do it.

Erectile dysfunction – the inability to get or keep an erection firm enough for intercourse – can be discouraging and stressful. If you start to experience some of the symptoms, you aren't alone. ED is a lot more common than you might think. More than 30 million men in the U.S. have experienced it.

But some ED treatment options can be unhealthy or downright dangerous, especially if you're taking medication for other health problems.

Don't be blue if pills are not for you.

Oral ED treatments aren't right for everyone. If you have cardiovascular disease, whether known or unknown, or if you take nitrates for chest pain (angina), Staman-T may be the safer, healthier option for you.

Staman-T lets you take control by targeting treatment right where it's needed. It's non-systemic and regulated by your physician, so there's no worry about dangerous side effects.

Staman-T may be a better ED treatment option over pills.

Staman-TTM
Healthier. Safer. Smarter.

Get some
satisfaction.

Give some, too.

ED can seem like the end of sexual satisfaction, and it's a touchy subject to talk about. But you're not the only person affected by your ED. Your partner is too.

A problem in your sex life is far too important to ignore just because it may be uncomfortable to discuss. ED can be caused by medical issues, by smoking or drinking, or even by stress, so it's important to talk about it and get treatment right away.

Staman-T can help improve your performance and bring back the satisfaction. It's fast-acting, usually bringing results within 5-20 minutes. And it's the safer choice.

So talk with your partner about your ED. And then talk to your doctor and ask about Staman-T.

30 million men in the United States are affected with ED and may experience:

- Low self-esteem
- Performance anxiety
- Depressed moods
- Guilt
- Stress
- Marital or partnership conflicts

30 million American men experience some degree of ED.

Staman-T[™]
Healthier. Safer. Smarter.

Important Safety Information

Staman-T[™] (alprostadil) is used to treat erectile problems in adult men. It is administered via injection into the side of the penis.

Staman-T is not for all men. It is not for those who have been advised not to have sex. It is not for men who have penis implants. Staman-T should not be used by men with medical problems that can cause long-lasting erections- four hours or more. Erections lasting more than four hours require immediate medical attention because permanent damage to the tissue of the penis and loss of potency may result. Tell your doctor about all of your medical conditions before using this drug.

Call your doctor at once if you still have an erection four hours after injection. This is dangerous. You must get medical attention right away.

The most common side effect of the treatment is mild to moderate pain after injection. About one third of patients reported this pain but very few stopped treatment for this reason.

Users may get a small amount of bleeding at the injection site. Call your doctor if you notice any redness, lumps, swelling, tenderness or curving of the erect penis.

Staman-T should not be used more than three times per week. There must be at least 24 hours (one day) between each dose. It should produce an erection in about 5 to 20 minutes that should last about 60 to 90 minutes. You must be instructed by your doctor on the injection procedure before using this drug.

Do not share needles or syringes. Put used needles and syringes in a safe container before throwing away. Protect others from getting stuck by the needle. Staman-T does not prevent the spread of sexually transmitted diseases, including AIDS, so please practice safe sex.

Safety counts.

When it comes to your health, especially your sexual health, your doctor is your best connection. Before starting any ED therapy, get a physical exam, including a complete medical and sexual history. Then talk to your doctor about Staman-T.

Having an extensive track record of safe use, Staman-T is the safer, smarter choice in ED therapy. Staman-T is a tried and tested formula, with ingredients approved by the FDA. Fast-acting and effective, Staman-T is even for men who can't tolerate an oral ED therapy.

And, Allianz Pharma, the maker of Staman-T, provides a patient support line that is available 24 hours a day, seven days a week, to answer any questions.

Questions answered 24 hours a day, 7 days a week.

Staman-T[™]
Healthier. Safer. Smarter.

What's keeping you down?

Concerned about beginning ED therapy?
The sooner you start, the sooner you can

Allianz Pharma

Allianz Pharma is an innovative pharmaceutical company that is pioneering the clinic-in-a-box model, giving physicians more control over the therapeutic treatment of erectile dysfunction (ED). The clinic-in-a-box concept strengthens the doctor/patient relationship by maximizing the physician's involvement throughout the patient's entire treatment. Patients are guaranteed the highest level of privacy and convenience because physicians are trained to dispense Allianz Pharma's ED therapy, Staman-T, right from their office. The ingredients in Staman-T therapy have been tried and proven for years, with an extended track record of safe use.
