

Net Zero Enterprises, a cleantech solutions firm, is pleased to announce the launch of its fully-featured website, NetZeroEnterprises.com. The new website and brand refresh are more closely aligned with the company's strategic vision for integrative technologies within large-scale global investments.

Net Zero organizes, finances, builds, and launches projects that address a series of major problems on the planet today. Their Cluster Model project structure combines solutions that focus on integrating multiple and commercially proven technologies within a close-loop system. Their highly successful* Cluster Models address issues of:

- organic food production methods <<link>> that accommodate the increasing global agricultural need to provide for exponentially growing populations.
- access to potable water<<link>>. With fresh water comprising a mere 1% of the world's overall water supply, these projects both conserve the precious resource and convert waste into drinking water.
- waste disposal methods<<link>> that recycle waste streams into usable elements-- such as electricity-- that limit the amount of toxic mass dumped into landfills.

Net Zero Enterprises' Front End Loading process has allowed the company to develop under the radar while focusing on the projects themselves. They have been involved in over 150 capital-intensive asset developments; all projects are now shovel-ready, and the company is poised for rapid expansion. The site launch complements the massive strides that Net Zero has made towards their goals.

The new website offers a clean, modern design, easy-to-navigate functionality, and a content-rich site experience. Extensive content additions include case studies, project updates, a blog series, and a detailed downloadable eBook on investing in the cleantech industry.

* Net Zero projects have a track record of being on or ahead of expected performance, budget and timeline goals in 95% of all cases.
