

# WALL STREET ENGLISH EXPERIENCE

## Welcome to Your New Course

Wall Street English wants you to succeed in learning English. We are pleased to announce we have completely redeveloped our course to make it more personal and flexible to help keep you motivated and achieve your goals. With our new course, you can clearly track your progress and see your results.

Our new course offers 20 Levels of English from beginner to advanced learners. We've integrated content for General English, business English, and advanced learners into one continuous course. The language skills you learn in each Lesson are part of a continuous experience where vocabulary and skills build on each other as you progress through your course.

Our new curriculum is built on the [Global Scale of English Learning Objectives](#). Because of this, you will know what language you will be learning and what level of English you will be achieving with each Lesson, Unit, and Level so you can clearly track your progress.

Your new course includes these exciting features:

### New Learning Content

We have developed all new learning content including new Interactive Lessons, new exercises in your Student Manuals/Digital Books, and new Encounters. We are introducing fun new characters to present the language in high quality videos in your Interactive Lessons. Watch them experience life when they move to a big city to pursue their dreams—and learn English with them so you can achieve your dreams!

### New Dashboard

You will access your Interactive Lessons, Digital Books, and online community with a single ID and password through a new Student Dashboard. Here you will also be able to track your progress and review your performance. The Student Dashboard is available for multiple devices and browsers so you can easily access your course and all your information.

**With our new course you will clearly see results. Contact your course consultant for more information about this exciting new offering from Wall Street English.**
