North America 2.0
A Workforce Development Agenda
Figure 1. Employers in North America Having Difficulty Filling Jobs

Source: Manpower Group, 2018 Talent Shortage Survey.
Figure 2. Percentage of Workers that Might Need to Change Occupations by 2030

Surveyed over 300 global companies from 20 economies - representing 70% of global GDP and 15 million employees:

1. Across all jobs expect a 42% change in workforce skills from 2018-2022.

2. Over 54% of workers will require reskilling or upskilling.

3. Geographic location for production likely determined by availability of skilled local talent say 74% of companies surveyed. 64% highlight labor costs.

Factors determining job location in North America

Figure 10. Required Skills for Moving into Industry 4.0.

**COGNITIVE SKILLS**
- Advanced literacy and writing
- Quantitative skills
- Critical thinking
- Complex information processing

**SOCIAL SKILLS**
- Advanced communication and negotiation
- Empathy
- Ability to learn continuously
- Adaptability

**TECHNOLOGICAL SKILLS**
- IT literacy
- Data analysis
- Research
- Programming

Is North America ready for the coming automation?

Integrating Technology & Human Capital can Boost Profits and Employment: Accenture

Companies could increase profits by 38% & employment by 10% by 2022.

North American dialogue can help manage the transitions ahead.

Wilson Center proposal: a **tri-lateral task force provides an umbrella for public-private, federal-sub-federal working groups to identify best practices and develop proposals for cooperation across the three countries.** Four Working groups:

1. **Apprenticeships**, other **work-based learning & technical education**;
2. **Certifications** (e.g. wider recognition);
3. **Data** collection and better transparency;
4. **Best practices** shared to manage the **Fourth Industrial Revolution**.
Implementing the North American Agenda

• The overarching tri-national task force and the four working groups could be incorporated into USMCA/T-MEC.

• The successful implementation will depend on collaboration of governments, private sector, educational institutions, and unions, among other stakeholders, from all three countries.

• Dangers of inaction include social and political disruption.

• Good Workforce Development practices will improve competitiveness and managing tumult of technological change.
NORTH AMERICAN WORKFORCE DEVELOPMENT AGENDA
Elements that should be agreed among the three countries in a public-private multi-stakeholder process

ISSUE #1
Investing in Apprenticeships and Other Work-based Learning and Education

1. A definition of apprenticeships and other major types of work-based learning (WBL), and agree a minimum set of criteria and quality standards.

2. Agree on broad guidelines assigning roles and responsibilities to governments, industry and intermediaries regarding the development, implementation and funding of apprenticeships and other WBL.

3. Create a tri-national Career and Technical Education (CTE) and apprenticeship taskforce to identify best practices in strategies to promote apprenticeships and other types of WBL programs.

4. Agree on elements of a marketing strategy to increase public awareness of the benefits and advantages of work-based learning in order to change negative public misperceptions of such programs.

5. Build spaces to foster on-going dialogue between stakeholders across the region in order to share best practices on work-based learning and training, and to strengthen public-private partnerships.

6. Agree among the three countries on ways to incentivize and support companies, including SMEs, to develop training and learning programs for reskilling and up-skilling their workforces.
Credentials

**ISSUE #2**
Addressing Credentials and the Host of Issues Surrounding Them

1. Develop a common language (at federal, sub-national, continental levels) about credentials and competencies to facilitate understanding, high quality and transferability, as well as recognition.

2. Develop or strengthen national competency frameworks and align them to a shared tri-national common language of credentials and competencies.

3. Develop a set of guidelines to assess and validate informal learning and professional experience, and to identify skills associated to such experience. Share and emulate best practices across the continent.
Data Transparency

ISSUE #3
Improving Labor Market Data Collection and Transparency

1. Develop a set of norms to collect real-time labor market data and information in a consistent and homogeneous way so it is comparable across countries and across the region as well as easily accessible.

2. Develop a tri-national online platform (linked to national platforms) to serve as a hub for real-time labor market data collected by the three countries and for best practices from the public and private sectors.

3. Develop guidelines to make the tri-national platform and data tools openly available to all stakeholders, while allowing space for the development of private sector initiatives.
Best Practices for Industry 4.0

**ISSUE #4**
Learning Best Practices for “The Fourth Industrial Revolution” and the Future of Work

1. Identify successful examples of private and public collaboration, with emphasis on highlighting promising steps and tools to incentivize companies to invest in reskilling and up-skilling of their workers, to provide mid-career training and learning opportunities, and to develop agile training and learning programs to ease the transition and improve the quality of work transformations.

2. Agree on approaches and strategies to encourage companies to collaborate with educational institutions, unions and other interested parties to better align curricula with the evolving labor market needs, better connect graduates to the labor market, and foster the modernization of educational spaces.

3. Build tri-national spaces to share best practices on the implementation of Industry 4.0 and to strengthen partnerships to better link the priorities of the business and education sectors as well as government.

4. Identify best practices for SMEs to keep up with technological changes, innovation and talent creation.

5. Establish trilateral research and innovation projects in strategic economic areas through grants and scholarships. Invest in evaluation programs to assess future trends and prepare for future skills needs.
