

Hey Ben,

2.5 million people decided to keep their Bitcoins secure while also choosing a convenient wallet.

Yes, we are talking about the users of the [Bitcoin.com Wallet](#) :)

While celebrating this awesome milestone, **let's see the key reason we created this wallet: security.**

Low-security wallets that are prone to hacker attacks and fraud, just don't do it for us. This also includes exchanges. That's why the Bitcoin.com Team took on a new challenge: to create a wallet that combines security and accessibility for everyone.

With the help of the 2.5 million people who chose not to trust any third-parties with their Bitcoins, we created a wallet that looks after your best interests.

At Bitcoin.com, we always emphasize the security of your coins. **That's why it is crucial to choose a wallet that gives you full control of your private keys.** Ours does. Many other wallets do not.

Your private key is the single most important factor for the financial security of your cryptos. **It has to be stored in a secure place with exclusive access only to you, as you use it to access your funds.**

If it falls into the wrong hands, you can be sure your Bitcoins will be stolen.

[While the Bitcoin.com Wallet is secure](#), it also provides you with a high level of convenience. You can easily access it from anywhere, whether it's your phone or your laptop. **You only need to download the app to use the wallet.**

Our developers have worked hard to make the app as user-friendly as possible to make your experience awesome.

Here's a rundown of all the features our Bitcoin.com Wallet offers:

- Safe storage for both your **Bitcoin Cash (BCH) and Bitcoin Core (BTC)**
- An easy backup function as well as storing your private keys securely
- Available on all major platforms, including **iOS, Android, Mac, Windows, and Linux**
- The integrated ShapeShift app lets you **convert between BCH and BTC** effortlessly
- Providing you **quick access to our services** where you can buy Bitcoin, read the latest news, use our charts and tools, and **get free Bitcoin Cash**
- Shared wallets using multisig technology for increased security

Did you know the latest exchange hack netted the attackers over \$23 million?

About a week ago, the decentralized exchange Bancor was hacked with perpetrators using a compromised wallet to steal the funds of the users.

Avoid hackers and keep your Bitcoin safe, 2.5 million people can't be wrong.

[Download our free wallet now](#) and use our faucet in the app to get some free BCH!

[I Want To Keep My Bitcoins Secure](#)

Enjoy,
The Bitcoin.com Team
