

Hey Ben,

This is the app that every crypto holder refreshes every 30 seconds... the one that sometimes makes you happy when you check your phone, and other times, sad.

We're talking about portfolio apps today ;)

We've just compiled a list for you with the best mobile apps to track how well your coins are doing.

Let's dive in!

Blockfolio

As one of the most popular options on the market for crypto portfolio tracking, Blockfolio offers great features with a clean design as well as options for customization.

The free app, which is available for both [iOS](#) and [Android](#), tracks many coins, offering tons of options for each. Features include a basic news feed and the ability to check the actual order book of a crypto on different exchanges.

If you are just in the phase of converting currencies on crypto exchanges, **Blockfolio's alert feature comes in very, very handy**. Just set up an alert to notify you when a coin reaches a certain price, and BOOM! You can buy it cheaper or sell it at a better price.

Delta

This portfolio tracker app is very similar to Blockfolio. It's a must-have if you are looking for a precise and fast way to track your cryptos.

As a platform that rapidly lists new cryptocurrencies, **Delta offers awesome features, such as watchlists and multi-portfolio tracking**.

Delta offers a simpler, more basic solution for tracking single coins. You can't see the actual order book on different exchanges, such as in the case of Blockfolio. There's only a chart where you can see the price of each crypto.

Delta is also available for both [iOS](#) and [Android](#) for free.

Coin Stats

If you are looking to see every bit of available info about your coin, Coin Stats is your way to go. The app features over 1,800 cryptos, aggregating and tracking the prices of 80 exchanges.

Similarly to Blockfolio, this app also allows you to **set up custom alerts to notify you when the time is right to buy or sell**. Features include news from over 40 media outlets and a chatbot based on Telegram.

You can download Coin Stats both for [iOS](#) and [Android](#).

Blox

One of the newest players on the market, **Blox features a fantastic design for crypto holders**. It's still in an early phase, but the developers are constantly adding cool new features to the portfolio tracker.

One of these is **the "HODL" feature that allows you to set a timeframe to hold your coins**. The app will block your access to your cryptos until that specific time period has passed.

Blox's ecosystem is fully tokenized, meaning that **you can use the platform's native CDT token to access premium features** and earn tokens by using the app to track your portfolio.

Blox is a free app, which you can download to both [Android](#) and [iOS](#).

Want something cool to see stats about your cryptos on desktop instead?

[Give Satoshi Pulse a try!](#) It's [Bitcoin.com's fully featured crypto price aggregator](#), listing every important aspect of your favorite coins, including price, market cap, top markets, latest news, and more.
