

BUILDING ON INNOVATION

LIMFINITY[®] IS THE FOUNDATIONAL PROGRAM UPON WHICH RURO SOLUTIONS ARE BUILT. THIS SOPHISTICATED, PROPRIETARY SOFTWARE GIVES RURO'S IN-HOUSE ENGINEERS THE FLEXIBILITY TO INNOVATE AND THE TOOLS TO PRODUCE MODERN, COMPLETE SOLUTIONS WITH EXCEPTIONAL EFFICIENCY.

LIMFINITY® AND LAB SOLUTIONS

Limfinity® redefines what's possible. Because of the capabilities of the Limfinity® framework, RURO can produce flexible solutions that redefine the delivery of enterprise applications. Rather than building each new solution from scratch, RURO begins with the ready-built Limfinity® software and adds features, modules, and specialized capabilities as necessary to create secure, compliant life science applications that meet unique needs.

Limfinity® is evolved enough to allow for quick turnaround of new solutions, and flexible enough that it can be entirely customized to adapt to the needs of different laboratory disciplines. Core to the success of these principles is RURO's "Bricks" functionality, a series of custom-built modules that allow data model components and workflows to be built onto the solutions.

Having a proprietary foundational program specifically designed as a foundation for lab applications means that RURO can develop new lab software more quickly, more efficiently, and with less potential for errors. For our clients, the end result is that their RURO solution will be both reliable and innovative.
