

TELLTALE SIGNS IT IS TIME FOR AC REPLACEMENT

Most homes at St. Louis have their windows closed during summer to keep the cooler air from their [air conditioner unit](#) trapped. These units always require routine maintenance to keep it functioning.

Energy bills may rise tremendously because of a non-functional AC, and this may frustrate the homeowner while trying to make a comfortable home. The best way to make your air conditioner last for a long time before it is replaced is ensuring its operational efficiency which gives rise to the need for its servicing and maintenance to keep it running smoothly. Though they are not designed to last forever, there are signs to look out for knowing when you need AC replacement before it becomes an emergency.

If your unit exhibits any of the following signs, it may be time for a replacement - and if you need AC replacement services today, Contact the experts at Galmiche & Sons, an [HVAC Company](#) located in St. Louis or Call us on 314-993-1110 and we'll take care of your need.

5 Signs it is Time for AC Replacement

- **Frequent Breakdown** - If your unit breakdown frequently, then you need to consider a replacement. Though the AC replacement may cost more than the repair, it is the most cost-efficient option because all the money spent on repairs will be better spent on a replacement.
- **High or Low Humidity Level in your Home** - Air conditioner helps manage humidity levels in your home to give you optimum comfort, but if there is moisture accumulation around the windows, then the unit may not dehumidify your home properly. If your home is having mold problems without any damage to water outlets, humidity may be the cause. Also, if the humidity level is too low, then the unit may be malfunctioning and you need an AC replacement.
- **Increased Energy Bills** - If you suddenly notice an increase in your utility bills while you haven't change anything pertaining to how you use your air conditioner, it may not be running efficiently anymore and you need to consider replacing it. Air conditioners with a high SEER rating of 14, uses less energy but are more efficient.
- **Your unit is more than a decade old** - The working lifespan of air conditioners is 10-years before replacement. If yours has reached, or it's close to the end of its lifespan, you should start planning for its replacement. Saving for a new one now will help you avoid an emergency in case of a sudden breakdown. Remember, there are benefits of replacing an old AC unit with a new energy-efficient system.
- **There's no cool air** - Poor airflow and inefficient cooling is the easiest sign that your unit needs servicing. If your AC is not blowing cool air while running efficiently though it is properly maintained, you may need AC replacement. If you want to be comfortable with cool air in your home, get your AC unit replaced now.
