

Field Use Cases Hosted by The dCloud Community

Cisco dCloud and Enterprise Networking

Mary Trobaugh

Digital Content Technical Writer

30 August 2019

Updated May 2017

Welcome to the Cisco dCloud Community

The Demo Center of Excellence equips sellers to help customers **Learn**, **Experience**, and **Validate** Cisco solutions.

“Be a game changer.”

The dCloud
Community now offers
a way to host field
product use cases.

How it works

Once a demo is released, the dCloud Technical Writer creates a discussion in the dCloud Community and adds the product use case tag.

Anyone can reply, add the tag and post their use case.

The screenshot illustrates the process of creating a forum post in the dCloud Community. It is divided into two main sections: the initial post creation and the preview of the post.

Initial Post Creation:

- Title:** Re: Cisco DNA Center Automation and Assurance v1.3.0 – Instant Demo
- Body:** The text "Attached PowerPoint that lists demo use cases for Cisco DNA Center 1.3.0 provided by Satpal Ranu." is entered. The "Photos" and "Video" icons in the rich text editor are highlighted with an orange box.
- Message Tags:** A "Message Tags" box is shown with the tag "Cisco DNA Center v1.3.0 Use Case" selected. The "Email me when someone replies" checkbox is checked.
- Attachments:** A file named "DNAC_1.3.0_...ecases.pptx" is attached. The "Choose Files" button is highlighted with an orange box.

Preview:

- The "PREVIEW" tab is selected in the rich text editor.
- The post content is displayed as it will appear, including the user profile of "mtrobaug" (Cisco Employee), the title, the body text, and the tag "Cisco DNA Center v1.3.0 Use Case" under the heading "Everyone's tags (1)".
- A "Reply" button is visible at the bottom of the preview area.

Final Post:

- The "Post" button is highlighted with an orange box, indicating the final step in creating the post.

Community Guidelines:

As a user of the community, it is your responsibility to ensure the content you post does not contain sensitive and/or confidential information. The following is partial list of what you need to be careful about posting as it can make you and your network devices vulnerable

1. Any personally identifiable information
2. Installed applications and login credentials
3. Network architectures
4. Network diagram from networks in production environments

Also take care to not publicly post sensitive and/or confidential and restricted content. Any content that you post in the community is public and can be viewed by other members of the community.

Refer to Cisco Community Acceptable User Agreement and the Cisco Community Guidelines for more details

How it works

Click on the product use case tag to get the URL for all associated posts.

Cisco DNA Spaces Use Case

Use commas between tags

How it works

Don't see the product use case tag you're looking for?

1. Create a new Discussion.
2. Under Labels, click Best Practice.
3. In the Message Tags fields, type your product use case.
4. Add your use case to the message.
5. Preview and post!

“Be a game changer.”

List of current EN product use case tags

- Cisco DNA Center v1.3.0 Use Case
- 4D SD-WAN POC Tool v1 Use Case
- Meraki and Cisco DNA Center Use Case
- 4D SD-WAN (Viptela) v3.1 Use Case
- ISE Enterprise and Security v2 Use Case

*Be a game changer
and add
a use case to your
product on
the dCloud
Community today!*
