

Thanks for checking out our JackpotCity candid review - if you're interested in migrating to the world of online betting, stick with us while we fairly and honestly review their games, bonuses and services. While JackpotCity is one of the smaller names in the industry, it doesn't deserve to be. Between its astoundingly generous welcome bonus, 5-star promotional rewards and friendly atmosphere, this online casino is easily somewhere I could whittle away the hours thrashing suckers at video poker with a Cuban cigar hanging from my mouth.

JackpotCity Casino boasts 500 world-class online casino games and over 200 mobile games with premium quality and graphics. With an ocean of choices, it's sometimes hard to know where to start, but JackpotCity puts emphasis on playing **what you love**. A blackjack and poker fan myself, I feel at home here. JackpotCity successfully offers all the fun and atmosphere of a real casino and none of the gum stuck to the sole of your shoe. Running on Microgaming - the favoured platform for high-quality online casinos - the features are slick, fast and modern, and allows you to use the casino on any mobile devices.

While its software and games are huge sellers for JackpotCity, it's their bonuses and promotions that really boot any competitors out of the way. You could win up to £1600 *just for signing up and placing a deposit* - they give you 100% of your deposit back, so you've got double what you put in to play with. Sure, it's a marketing tool to get you to play more of their games - *but does anyone really care when they'll match up to £800?*

They also offer a wide range of daily, weekly and monthly prizes which could be anything from casino credit awards to "cash, gadgets, luxury holidays and 5-star cruises" as well as instant-win games for the impatient players among us. Paying out awards as fast as 24-48 hours, JackpotCity is one of the fastest among its competitors.

JackpotCity Casino assures you that "once you've played at JackpotCity, you won't want to play anywhere else". I'd usually scoff at such a bold statement - but I think they might be right.
